

SOFIA EGAN

Cambridge, MA · sofia@eerier.dev · eerier.dev · github.com/eeriergosling · linkedin.com/in/sofia-egan

EDUCATION

Massachusetts Institute of Technology — Cambridge, MA

B.S. Computer Science (Course 6-3) or CS & EE (Course 6-5), intended — Class of 2030

EXPERIENCE

Hack Club — Software Engineer & Program Manager (*Part-time*)

August 2024 – Present

- Built internal tools for Hack Club's events, including project submission and review platforms and Slack bots used by thousands of people
- Managed over \$500K in event budgets across programs
- Built and managed teams of up to 70 contractors and volunteers, including team leads with their own reports
- Ran [Horizons](#), an online program with 6,500 users and 1,700+ shipped projects, plus in-person hackathons in SF, Sydney, Berlin, Singapore, Toronto, and Cairo
- Ran [Campfire Flagship](#), a 3-day game jam in Los Angeles for 60 teens in partnership with [Open Sauce](#), with 10 YouTubers mentoring at the event, including Michael Reeves, Code Bullet, and William Osman
- Ran [Shipwrecked](#) (1,700 users, 800+ shipped projects, 110 in-person attendees) and [Counterspell](#) (50 concurrent hackathons, 1,500 total attendees)

Princeton Visual AI Lab — Research Intern

June – August 2025

- Trained adversarial classifiers on CIFAR-10 under PGD and FGSM attacks and compared their input gradients to those of a pretrained diffusion model, furthering research into whether classifiers can be distilled directly from diffusion models

BB&N Robotics Team — Captain

September 2024 – June 2026

- Led the school's VEX robotics program, managing a \$5K annual budget and expanding from one team to four subteams

PROJECTS

- **Web development** — Built and contributed to many web apps (commonly React and Next.js), including Hack Club websites for Horizons, Shipwrecked, Counterspell, and Sprig (and projects like [HacKnight](#) and [eerier.dev](#))
- **retro-sdk** ([repo](#), [pypi](#)) — Reverse-engineered [Retro](#)'s internal API and built a Python SDK (published to PyPI) for auth, media upload, albums, comments, and search (built **retro-slack-bot** ([repo](#)) on top of it)
- **Security research** — Found a broken access control vulnerability in [Fillout](#) that exposed and allowed editing of restricted Airtable data; earned a paid bug bounty
- **nand2tetris** ([repo](#), [npm](#)) — Built a computer from NAND gates up through an OS; wrote and published a Jack-language compiler to npm
- **BWSI Build-a-CubeSat Challenge**, 2nd place ([repo](#), [video](#)) — Wrote power-outage detection code and a synthetic image generator for a satellite-based outage-detection system
- **CNN from scratch** ([repo](#), [presentation](#)) — Implemented CNN forward/backward-pass math from first principles
- **Hackathon projects** — Attended 15+ hackathons, building web apps, iOS apps with Swift, games with Unity, and hardware projects with Arduino

SKILLS

Languages: Python, JavaScript/TypeScript, Java, C++, Swift; **Frameworks/Tools:** React, Next.js, PyTorch;

Infrastructure: Docker, Coolify, PostgreSQL; **Hardware:** Arduino, embedded systems; **Other:** SDK/API design
